

Silicone Extrusions / Material Safety Data Sheet

Handling, Health, and Safety Information

- Silicone rubber is inert and non-toxic, so therefore does not represent a health hazard.
- Silicone rubber is made from ingredients listed under FDA regulations 21 CFR 177.2600, which applies to rubber articles intended for repeated use in contact with food.
- The occupational life of the product is difficult to evaluate on an individual basis and depends largely on the working environment.
- We do not recommend any special precautions for handling or storage but do stress that the product be boxed or bagged to protect it from accidental damage.
- In a fire the product will decompose to a fine ash. No special fire-fighting procedures are necessary. In the event of fire, extinguish with either C_2F_6 foam, dry powder or water spray.
- For the safe disposal of silicone rubber after use, we recommend that you follow the national or local authority regulation guidelines.
- The product is of a low order of toxicity. It is non-flammable but will burn if ignited.
- Silicone rubber does not contain any CFC's and is manufactured under contained conditions.

All recommendations and information contained on this data sheet are, to the best of our knowledge, correct. Product specifications are intended as guidelines. Since conditions of service are beyond our control, users must satisfy themselves that products are suitable for the intended use. No guarantee or warranty is given or implied in respect of information or recommendations, or that any use of products will not infringe rights belonging to other parties. We reserve the right to change product design and properties without notification.
